Extension 2: Blocking and unblocking PIN cards

The assignment for this extension is as follows: A PIN card should be blocked after three consecutive attempts to use it with an incorrect PIN code. After a card is blocked it cannot be used anymore to access (the money on) a bank account.

A PIN card can be unblocked by the user by logging in and calling the unblock card method, see below for the details of this method.

unblockCard method

Method unblockCard

Description Unblock a blocked PIN card.

Authentication REQUIRED (account)

Parameters This method accepts the following parameters:

authToken The authentication token, obtained with getAuthToken

iBAN The number of the bank account

pinCard The number of the pinCard

Returns An empty dictionary if successful

Errors InvalidParamValueError: One or more parameter has an invalid value. See message.
NotAuthorizedError: The authenticated user is not authorized to perform this action.
NoEffectError: If the card is not blocked this method will have no effect.

Example

```
--> {"method":"unblockCard",
        "params":{
            "authToken": "some.long.auth.token!%&...",
            "iBAN": "NL69INGB0123456789",
            "pinCard": 1234,
        }}
<-- {"result": {}}
```
