# Extension 3: Replace PIN card

If a PIN card gets lost or stolen it should be possible to invalidate the card so it cannot be used by a third party. If you invalidate a card you will automatically receive a new PIN card. Receiving a new PIN code is optional. A new PIN card costs € 7,50 and this amount should be obtained from the corresponding bank account.

The invalidation of a PIN card will happen through a call to the server, see below for the details of this method.

### invalidateCard method

**Method** invalidateCard

**Description** Invalidate a PIN Card and obtain a new one.

**Authentication** REQUIRED (account)

**Parameters** This method accepts the following parameters:

**authToken** The authentication token, obtained with getAuthToken

**iBAN** The number of the bank account

**pinCard** The number of the pinCard

**newPin** Boolean to indicate if the user wants a new PIN code

**Returns** A dictionary containing the following members:

**pinCard** The number of the new pin card

**pinCode** (optinal) The new pin code of the pin card

**Errors** InvalidParamValueError: One or more parameter has an invalid value. See message.
NotAuthorizedError: The authenticated user is not authorized to perform this action.

**Example**

```
--> {"method":"invalidateCard",
        "params":{
            "authToken": "some.long.auth.token!%&...",
            "iBAN": "NL69INGB0123456789",
            "pinCard": "1234",
            "newPin": "false",
        }}
<-- {"result": {"pinCard": "6789"}}
```
